Dear Team,

As per the discussion with madam, please find the POA for SLRAMS mobile apps (RMMS & DSIS).

1. Reinitiate QA testing to confirm the working of applications.
2. As the mobile app (DSIS) has been removed from play store due to policy changes and login issues, it is decided to republish the DSIS app to client stage with its current working state so that the google review process can be done.
3. Once review is done the same apps will be connected to production.

Note: To reflect the changes in mobile apps partial deployment of services from QA has been deployed in client stage on 19-March-2025 with management approval.

These changes are restricted to only SLRAMS and RRAMS as these changes are particularly made based on audit requirements.

#6 - 25/03/2025 08:31 PM - Venkata Suryateja Thripuraribhotla

Both RMMS and DSIS have been successfully published in client play store account. They are reviewed by google and are available now with client stage application connected to them.

We have requested client permission to deploy the same changes to production environment and connect these mobile apps to live application and publish to play store again.
