On 15may2025,this task is completed.
Extracted 2018 pilot data for almost 25 tables(including condition and Inventory) which is in RRAMS_Pilot
Verified the road codes whether they are same as in present RRAMS, Some Road Codes are not same as Pilot. So verified road by road from Pilot and Present roads in the gis.
And Some chainage ranges are different when compared to both data. So according to present network chainages cutted some chainages for some roads and Imported all 25tables data in Stage and then Production applications.
Note: SH002C having out of range chainages, so I didn't imported this road code data for any table.
